INTRODUCTION

1. General Information

This catalogue lists all map series published by the Directorate of Overseas Surveys which are available for sale to the public. In general maps have not been included unless the stocks held are considered to be large enough to meet normal demands or if, where stocks are low, it is planned to reprint the map concerned in the immediate future. Where a map which has appeared in a previous catalogue has been omitted from this catalogue it is possible that a very limited stock may still be held, but copies could only be issued if required for some special purpose. Where a map is superseded by a new edition or where an existing map is effectively made obsolete by a completely new map or new series published by the Directorate all stocks of the superseded map are withdrawn from sale and are destroyed.

The majority of maps produced by the Directorate are topographical maps published at scales varying between 1:25,000 and 1:125,000. Larger scale maps have been published in a few cases. In addition to these a considerable number of small scale maps have been produced, including the "Colonial Office List Series" which was originally prepared as a map supplement to the Colonial Office List in 1948. Many of these maps have been revised and reprinted for incorporation in official reports.

Thematic maps have been produced to illustrate specialist information such as the geology, soils, land use, vegetation or population distribution of certain areas. Where corresponding reports or memoirs have been published by the organisation for whom the maps were prepared this has been noted in the catalogue. It must be pointed out that the Directorate is not in any way responsible for the contents or the sales of such reports and the fact that such a report is named in these pages does not guarantee that it can be purchased through the Directorate's Agents.

The catalogue also includes one "map extract", a section of a sheet of the 1:50,000 map of Jamaica. This "extract", like others which will be published later, is intended to be used for teaching purposes.

2. Catalogue Arrangement

The body of the catalogue consists of forty-nine sections of text followed by a series of index maps showing the principal map series produced by the Directorate. Each section of text, which may include one or more pages, lists all the maps, or map series, covering a single territory, the territories themselves being grouped alphabetically under each major region (e.g. Fiji will be found under "Far East and Pacific Ocean"). In each section maps are divided into "topographic maps", arranged in increasing scale order, and "other maps" normally grouped by subject. For each map or series of maps the following information is given: natural scale, D.O.S. number, standard series designation (the significance of these numbers is explained in Section 6), title, edition number, date(s) of publication and price. Where the map or map series is shown on one of the printed index maps this will be noted under "remarks".

3. Ordering Maps

When ordering maps, the following details should be quoted: D.O.S. number (which can be found in the lower, left-hand corner of the sheet), individual sheet number, scale and title of the series. Some series, covering small islands, have names only and in such cases the name, as for example "Antigua - West Sheet" must be quoted.

The Directorate does not sell maps direct to the general public. A list of the Directorate's agents for map sales appears at the beginning of this catalogue. Overseas users requiring maps of the territory where they are living should apply to the Directorate's local agent in that territory, usually the Director of Surveys or his equivalent. Where a map user requires a map of any other territory he should apply to the Directorate's principal agents, Edward Stanford Ltd. in London. Maps of the small scale "Colonial Office List" series may also be purchased at Commonwealth Institute, South Kensington, London, S.W.7.

Prices are quoted for most of the maps and series published although it is not practicable to give details for individual sheets in the larger series. The map price is based on the style of the sheet and, since there have been changes for successive blocks of sheets in a series, it is not always possible to quote a single price per sheet for all maps in one such series.

It should be noted that in many cases the Directorate has supplied reproduction material for its maps to survey departments overseas. These departments have sometimes used the material to produce new editions of these maps which may incorporate more recent information than the latest D.O.S. edition. Such departments may also have produced blocks of mapping using the same sheetlines and similar styles to those used by the Directorate for mapping at comparable scales. These maps should be obtained from the departments concerned or from their agents in London, usually Edward Stanford Ltd.

4. Copyright

Copyright in all maps published by the Directorate is vested in the Crown. All applications to reproduce a part or the whole of one of these maps should be addressed in the first place to:

The Controller,
Her Majesty's Stationery Office,
Atlantic House,
Holborn Viaduct,
London, E.C.1.

5. Series Numbers, Sheet Numbers and Sheet Names

Every series of maps, and each individual map which does not form part of a series, published by the Directorate of Overseas Surveys is allotted a unique number. This reference consists of the letters "D.O.S." (D.C.S. on sheets published before 1957) followed by two, three or four digits.

Sheets may be numbered on any one of the following three systems, examples of which may be seen on the sheet index diagrams contained in this catalogue.

(a) The majority of D.O.S. topographical series carry a simple system of running numbers. These numbers will commonly refer to an area either of 30' of latitude x 30' of longitude or 15' of latitude x 15' of longitude. Sheet lines for larger scale maps covering a smaller area are usually arranged as a direct breakdown from the standard sheetline system. Thus the town of Hargeisa in Somaliland Protectorate is covered by 1:125,000 Sheet 34 and by 1:25,000 Sheet 34 SW 3. (A 1:50,000 sheet covering the town would be numbered 34 SW.)

(b) Quite a number of D.O.S. maps carry numbers which represent a breakdown from the numbering system used on the International Map of The World on

/the

Introduction (contd.)

the Millionth Scale (commonly abbreviated to I.M.W.). These "I.M.W." numbers tend to be rather cumbersome (Somaliland Protectorate Sheet 34 becomes NC-38-0-I) and rarely appear by themselves on D.O.S. maps but they have the advantage that the user can work out the number of any sheet provided its latitude and longitude (from Greenwich) are known.

- (c) A third system has come into use in recent years, the so-called "Degree Square System", in which each degree square is given a four figure reference number consisting of the latitude followed by the longitude of its south-west corner if it is north of the Equator and of the latitude followed by the longitude of its north-west corner if it is south of the Equator, assuming in both cases that the area in question is east of the Greenwich Meridian. There will then be a simple breakdown of the degree square into quarters, sixteenths and so on for series of maps at scales of 1:100,000, 1:50,000 and larger. Thus Lusaka in Northern Rhodesia, latitude $15^{\circ} 25'$ S. and Longitude $28^{\circ} 17'$ E. will fall on 1:50,000 Sheet 1528 A 4 (see index diagram for Northern Rhodesia and Nyasaland). Obviously confusion could arise under this system in areas straddling the Equator. To eliminate this between 10° N. and 10° S. the letters N or S are substituted for the first digit which would otherwise be O. Fort Hill in Nyasaland will therefore be found on 1:50,000 Sheet S933 C 2. Modified forms of the "Degree Square System" have been used in the Falkland Islands Dependencies and in Borneo.

An increasing number of maps published by the Directorate carry sheet names. Owing to the small scale of most index maps these names have generally had to be omitted.

6. Standard Series Designations and Edition Numbering

Both the text and the index maps in this catalogue make references to standard series designations. When allocated to the Directorate's maps these numbers appear in brackets after the D.O.S. number (e.g. Nyasaland 1:50,000 sheets carry the numbers D.O.S. 425 (Series Z742)). Standard series designations should not be quoted when ordering maps from the Directorate's sales agents.

These numbers represent part of a scheme for the closer co-ordination of mapping carried out by various civil and military mapping organisations.

In the past, maps of a single area have sometimes been produced by several different organisations and, although on the same sheetlines and largely derived from the same basic sources, they have been given different series numbers and independent edition numbers. Thus map users had no means of knowing whether or not the third edition of a sheet produced by A was more up to date than a second edition of the same sheet produced by B. Now, with the new co-ordination, a single standard series designation can be allotted to the sheets produced by A, B and all other collaborating organisations. In addition, the correct sequence of edition numbers is maintained for each sheet in a single map series, despite the fact that different organisations may have published successive editions. One result of the application of this system to maps published by the Directorate is that when a new edition is produced it does not follow that the edition number allotted to it will be the one following immediately after the number of the previous D.O.S. edition. Thus four successive editions of one 1:50,000 sheet of Kenya might have appeared since it was first compiled.

First Edition published by Directorate of Overseas Surveys.	
Second Edition	" Directorate of Military Survey (War Office).
Third Edition	" Survey of Kenya.
Fourth Edition	" Directorate of Overseas Surveys.

All these sheets would carry the same standard series designation but only the first and the fourth would carry a D.O.S. number.

The standard series designation system is based on one originally devised during the Second World War. For small scale maps (normally scales of 1:500,000 or less) covering either the whole world or a continental area this number consists of four digits. (Where a series covers the world the first digit is 1. First digits 2 to 9 indicate that a series covers a single continental area.) Numbers allotted to larger scale series consist of a letter followed by three or four digits. The letter indicates in what region of the world a particular series falls. The subsequent digits provide a unique reference number and also serve to show the approximate scale of the series and the sub-regional area, within the major region indicated by the key letter, which it covers. For example Nyasaland 1:50,000 maps (D.O.S. 425) have been given the standard series designation Z742. "Z" is the letter identifying the regional area which includes most of Central and Southern Africa. The first digit "7" indicates that the scale of the map is between 1:35,000 and 1:70,000. The second digit "4" shows that the series is confined to a single sub-regional area, the Federation of Rhodesia and Nyasaland. The final digit distinguishes this series from others at the same scale falling within the same sub-regional area (e.g. Northern Rhodesia 1:50,000 (D.O.S. 424) which has been given standard series designation Z741).

7. Keeping This Catalogue Up To Date

The information contained in this catalogue represents the situation on 1st June, 1960. In a few places references will be found to series in course of production for which no sheets have been published before June, 1960. Every month the Directorate issues an "additions list" showing all maps published since the previous list appeared. Lists published after June, 1960, will also show required amendments to the catalogue such as the change of address of sales agents. A copy of the most recent list is incorporated in each number of the "Monthly List of Official Colonial Publications". For the benefit of users who wish to keep this catalogue up to date a page has been provided on which the receipt of additions lists and the relevant amendments may be recorded.

Further information about the activities of the Directorate can be obtained from the annual reports on its work which are published by Her Majesty's Stationery Office. Each report covers the year ending on the 31st March preceding the date of its publication. Among other things these reports contain diagrams showing the progress of air photography, field surveys and mapping over East, West and Central Africa.
